Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. This communication is responsive to your preliminary amendment filed 12/20/04. Claims 17-31 are currently pending in this application. Claims 1-16 have been canceled.

Specification

2. The disclosure is objected to because of the following informalities: Paragraphs 2 and 3 of page 16 are the same.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 17-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Smith et al P.N. 6,208,136 (Smith).

Smith discloses a method and apparatus for Nuclear Quadrupole Resonance testing of a sample. Applicant's attention is directed to the description of the second variant of the second embodiment which description begins at line 60 of col. 22. Described therein is a multi-pulse sequence that consists of a combination of steady state free precession pulse sequences. The sequences are built on the principle of phase equivalence as described by Smith. In each of the pulse sequences there are at least two alternating phases. Note that the sequences may or may not include preparatory pulses. Note also

the equivalence of phase and frequency shifts as described by Smith. Also noteworthy is that Smith's pulse sequences are a modification according to the advanced principle of phase equivalence of a combination of PAPS and NPAPS sequences. Smith meets all the limitations of the claims at issue in their present form.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Magnuson et al. discloses a system for NQR detection, note the abstract of the disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Louis M. Arana whose telephone number is (571) 272-2236. The examiner can normally be reached on M-Thurs. Fridays Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego F. Gutierrez can be reached on (571) 272-2245. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
